Diploma Programme in Electronics and Telecommunication Engineering
Programme Structure

Programme Educational Objectives (PEO)
(*What the student will continue to do even after 3-5 years of working in the industry*)

PEO1: To produce diploma holders who have the ability to demonstrate technical competence in the fields of Electronics and Telecommunication engineering and develop solutions to the problems.

PEO2: To produce diploma holders who would be able to take individual responsibility and to work as a part of a team towards the fulfillment of both individual and organizational goals.

PEO3: To prepare the students to engage in professional development through self-study, graduate and professional studies in engineering, management and research.

Program Outcomes (PO) given by NBA.
(*What the student will be able to do at the entry point of industry soon after diploma programme*)

NO.	PO Statement
PO1	Apply knowledge of mathematics and engineering to solve problems in Electronics and Telecommunication Engineering.
PO2	Employ necessary techniques, hardware and software tools for modern engineering applications.
PO3	Demonstrate basic engineering practices and conduct experiments in electronics, electrical system and in programming language.
PO4	Model and simulate communication systems and analyse the performance using modern tools.
PO5	Solve problems through analytical thinking to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to engineering practice.
PO6	Follow and contribute to the developments in their own field, within realistic constraints such as economic, social, ethical, environmental and sustainability.
PO7	Have strong ethical and professional responsibility and adherence to quality.

PO8	Work as a member of a project team to find cost effective design solutions to problems related to electronics and communication systems.
PO9	Communicate effectively in both verbal and written forms
PO10	Appreciate technological change and the need for independent life-long learning.

Program Specific Outcomes (PSOs)

(What the student will be able to do in the Electronics and Telecommunication engineering specific industry soon after the diploma programme)

PSO 1. Design, verify and validate electronic functional elements for a variety of applications, with skills to interpret and communicate results.

PSO 2. Exercise good programming practices employing low or high level languages on appropriate platforms.

Note for All the Semesters :

1. Every student has to separately pass in End-Semester-Examination (ESE) for both theory and practical by securing minimum of 40% marks, (i.e. 32 out of 80, 20 out of 50, and 10 out of 25).

2. Progressive Assessment (PA) for Theory includes Written Exam – average of two PTs of 20 marks each. Progressive Assessment (PA) for Practical includes lab performance /micro projects/ Assignment/Quiz/Presentations/attendance according to the nature of the course. The scheme and schedule for progressive assessment should be informed to the students and discussed with them at the start of the term.

3. For developing self-directed learning skills, from each course about 15-20% of the topics/sub-topics, which are relatively simpler or descriptive in nature are to be given to the students for self-study and proper learning of these topics should be assured through classroom presentations by students.

3) **All practical exams/ oral are External and Internal.**

Prepared by Mrs. Janani Natarajan

NOTE:

Theory credits decrease from 4 to 3, New Subject only Practicals – Scilab - ET-11618 introduced & Mobile Commn- ET-11611 – Tutorial introduced – from January 2015

For Digital Signal Processing- Practical Exam introduced (instead of oral exam) from December 2015/ January 2016

Revised in the academic year 2017-2018

Mechatronics, IMQC and Technical Writing – three new approved subjects
* **Mobile Communication in Semester 6**, to be offered as an **Elective (E2)**, against the course titled **Data Communication and Computer Networking (E2).**
* **Advanced Power Electronics in Semester 6** to be offered as an **Elective (E3)** against the new course titled **Mechatronics (E3)**.

All course codes changed from 115……series to 155…..series from the academic year 2017-2018.

PROGRAMME TITLE: Diploma in Electronics & Telecom. Engineering

RATIONALE:

The glorious 21st century marks the growth of the mobile radio communication industry by orders of magnitude. The recent exponential growth in cellular mobile communication needs more skilled technicians for operation, maintenance and servicing of mobile cellular systems. This subject is classified under Applied Technology group and it is based on communication theory, which gives theoretical as well as practical knowledge of different cellular system. It covers digital cellular mobile systems such as GSM, IS – 95 standards, WLL, call processing & basics of mobile communication systems.

COURSE OUTCOMES & CO PO MAPPING

SEM VI C 309	MOBILE COMMUNICATION (9 TH COURSE IN THIRD YEAR)
C309.1	Interpret the concept of wired & wireless technology
C309.2	Analyze the construction and working of AMPS
C309.3	Appraise the cellular concept and mobile unit
C309.4	Elaborate the concept of GSM phones
C309.5	Employ the concept of CDMA phones
C309.6	Analyze the concept of transmission of data (i.e. voicetext, videotext, file, images) using multiple access techniques i.e TDMA, CDMA,FDMA
Mapping of Course outcomes (COs) to Program outcomes (POs)

Subject Expert

SECTION 1

Sr. No.	Name of the Topic	Periods	Marks
01	**1. Introduction to wireless communication System** **C309.1 C309.2** 1.1 Evolution of mobile radio communication 1.2 Mobile radio system around the world. (Such as AMPS, N- AMPS, IS-95, GSM) 1.3 Related definition base station, control channel, forward channel etc. Examples of wireless communication system such as paging system, cordless telephone system, cellular telephone system , how cellular telephone call is made	06	08
02	**Mobile unit C309.3** 2.1 Block Diagram and operation of mobile unit 2.2 Block Diagram & Explanation of frequency synthesizer 2.3 Block diagram and operation of transmitter, receiver, logic unit, control unit & handset	10	12
03	**The cellular concept. C309.3** 3.1 Introduction a basic cellular system. 3.2 Frequency reuse 3.3 Hand off, Type of hand off, hard hand off, soft hand off , delayed and queued hand off 3.4 Interference & system capacity. 3.4.1 Co channel interference & system capacity. 3.4.2 Channel planning for wireless system. 3.4.3 Adjacent channel Interference. 3.4.4 Power control for reducing interference (Closed loop, Open loop) 3.5 Improving coverage and capacity in cellular system. 3.5.1 Cell splitting. 3.5.2 Sectoring. 3.5.3 Repeater for range extension. 3.5.4 Micro cell zone concept.	16	20

SECTION 2

04	**Digital cellular mobile systems. C309.4** 4.1 G.S.M system architecture. 4.1.1 G.S.M services & features. Frequency Spectrum. 4.1.2 G.S.M radio subsystems. 4.1.3 G.S.M channel types. 4.1.4 Message & call processing in GSM 4.1.5 Privacy & security in GSM. 4.2 Signal System no.7 (SS7)—performance services.	14	16
05	**CDMA C309.5** 5.1 CDMA digital cellular standard IS-95. 5.1.1 IS.95 frequency & channel specification 5.1.2 IS-95 system architecture. Frequency Spectrum. 5.1.3 IS-95 CDMA calls Processing. 5.1.4 Security & identification in IS-95 5.1.5 Features of IS-95.	10	14
06	**Modern wireless communication system C309.6** 5.1 3GW-CDMA (UMTS) (Universal mobile Telecommunication system.) 5.2 3G CDMA 2000 5.3 3G- TD-SCDMA (synchronous) 5.4 Wireless local loop & LMDS (local multipoint distribution) 5.5 IMT 2000 5.6 Comparison of 3G systems.	08	10

IMPLEMENTATION STRATEGY
1. Teaching plan
2. Other resources like data projector, video presentations, PowerPoint presentations.

This subject has only theory lectures and theory examination (including periodical tests). There is no practical/ oral examination and no term work marks for this.

4) The assessment of Term-Work is Internal

RATIONALE:

Digital Signal Processing continues to play an increasingly important role in the fields that range literally from A (Astronomy) to Z (Zeugmatography, or magnetic resonance imaging) and encompasses applications in areas such as Compact Disc Players, Speech Recognition, echo cancellation in communication systems, image enhancement, geophysical exploration, noninvasive medical imaging, etc. This subject belonging to the Applied Technology groupaims to build concepts related to the fundamental principles and applications of Signals, System Transforms and Filters.

COURSE OUTCOMES & CO PO MAPPING

SEM VI C 310	DIGITAL SIGNAL PROCESSING (10 TH COURSE IN THIRD YEAR)
C310.1	Illustrate IIR & FIR Filters in Direct , Cascade and Parallel structure form.
C310.2	Analyse signals using Discrete Time Fourier Transform & Discrete Time Fourier Series.
C310.3	Evaluate Linear convolution & Circular convolution using DFT/IDFT method

C310.4	Apply DIT & DIF Algorithms to solve DFT
C310.5	Solve IDFT by using Inverse DIT & Inverse DIF Algorithms
C310.6	Calculate 4 point & 8 point DFT / IDFT using Twiddle factor method

RATIONALE:

This subject is categorized under Applied Technology. After understanding basic communication systems, it is important to proceed further on to the concepts related to Data Communication and Computer Networking. The field of communication is the fastest growing technology and undoubtedly heading towards to a runaway growth in future which makes it important to know how data transfer takes place from one system to another, through different channels and computer networks like LAN, MAN, WAN & the Internet. Protocols and standards along with different switching techniques are some other important issues which are covered in this subject.

COURSE OUTCOMES & CO PO MAPPING

SEM VI C 311	DATA COMMUNICATION AND COMPUTER NETWORKING (11 TH COURSE IN THIRD YEAR)
C311.1	Classify networks and design application based network architecture
C311.2	Calculate the performance parameters of given network
C311.3	Classify topologies and demonstrate the suitable networking devices for sharing the resources
C311.4	Organize the protocols used in OSI model
C311.5	Compare the TCP-IP model and OSI model
C311.6	Estimate different methods of error detection and error correction

RATIONALE:

This subject comes under the AppliedTechnology category. Presently, majority of the telecommunication systems operate on the basis of digital principles. It demands that the student has a good working knowledge of fundamentals of pulse and data communication. The subject will help the student in understanding the concepts of various pulse modulation techniques and methods of generating and demodulating, in each of the pulse modulation systems and digital carrier modulation systems.

COURSE OUTCOMES & CO PO MAPPING

SEM VI C312	DIGITAL COMMUNICATION (12TH COURSE IN THIRD YEAR)
C312.1	Calculate the performance parameters of Digital Communication System using the concepts of Information theory
C312.2	Encode the analog information using analog pulse modulation techniques.
C312.3	Convert analog signal into digital using different digital pulse modulation systems.
C312.4	Categorize the various multiplexing techniques in modern digital communications.
C312.5	Selectappropriate digital modulation technique as per the system requirement.
C312.6	Recover the original information through suitable digital demodulation technique.

PROGRAMME TITLE : Diploma in Electronics & Telecom. Engineering
SEMESTER : Six

1) Theory paper duration 3 hrs.
2) Theory paper assessment is Internal and External.
3) The assessment of Practical's is Internal and External.
4) The assessment of Term-Work is Internal.

RATIONALE:

The mechatronics course is an advanced course in the electronics and telecommunication branch. This subject will help student to understand the complex interfacing between the mechanical and electrical systems. This subject mainly focus on the electrically excited mechanical systems like actuators, sensors, MEMS, Controller , robot. Mechatronics forms a base for robotic engineering.

COURSE OUTCOMES & CO PO MAPPING

SEM VI C 313	Mechatronics ELECTIVE III (13 TH COURSE IN THIRD YEAR)
C 313.1	Identify the elements of Mechatronics.
C 313.2	Illustrate the functions and working of Sensors and Transducers in Mechatronics .
C 313.3	Demonstrate the controlling of PLC,CNC and microcontrollers inMechatronics
C 313.4	Explain various mechanical and electrical actuating systems.
C 313.5	Draw and identify the basic elements of Robotics and micro electro mechanical systems.
C 313.6	Apply the fundamentals of Mechatronics for automation of the system.

The assessment of projectoral is Internal and External.
The assessment of term work is Internal.

RATIONALE:

Project is classified under Applied Technology courses. In continuation to the Project work started by the student in the fifth semester, he/she has to meet the set goals of testing, finalization and completion before the end of the sixth semester. Project work is supposed to be largely a student centered activity. It is a purposeful student activity which is supposed to be planned, designed and performed by a student or a group of students, which ultimately will help them to accomplish higher level cognitive and affective domain activities. It will also help them to achieve psychomotor objectives. The objective of the project work undertaken is to reinforce and integrate previously acquired lower sub-skills and attitudes within a branch and slowly transform them into higher level skills. It will help to develop competencies and confidence to solve open and real life interdisciplinary problems. Project work is supposed to develop thinking, planning and decision making skills with ample scope for using creativity. It presents a challenging and task oriented learning environment with optional solutions, besides developing ability and confidence in accomplishing targets with given time and resources constraints. It is also meant to develop higher level interactive skills and ability of working in teams.

COURSE OUTCOMES & CO PO MAPPING

SEM VI C 314	PROJECT II (14 TH COURSE IN THIRD YEAR)
C314.1	Reinforce and integrate previously acquired lower sub-skills and attitudes within a branch and slowly transform them into higher level skills
C314.2	Develop competencies and confidence to solve open and real life interdisciplinary problems.
C314.3	Develop thinking, planning and decision making skills with ample scope for using creativity.
C314.4	Present a challenging and task oriented learning environment with optional solutions
C314.5	Develop confidence in accomplishing targets with given time and resources constraints and work as a team

OBJECTIVES/ CRITERIA FOR ASSESSMENT:
The students will be able to dothe following in relation to the **"translation"** of the expected course outcomes specified in the table above. It should be observed and evaluated by the concerned teacher whether the students do the following **during practical time**:

C314.1 - Apply and expand upon the previous knowledge gained in earlier semesters.
C314.2 - Work with confidence on PCB's, soldering/ de-soldering, testing of circuit, etc.
C314.3 - Make logical decisions pertaining to requirements of project.
C314.4 - Solve problems faced during the design and building and testing phases of project.
C314.5 - Work with confidence and in a timely manner, and work as a team together.

The course outcome attainment levels are to be evaluated on a regular basis for the **TERM WORK**, based on the student **commitment, interaction and activity, as defined in and stated abovein the corresponding objectives/ criteria,** during the practical time allotted to them for the **PROJECT WORK** for 8 sessions of 4 hours each by the concerned teacher. This is for **TERM WORK** of **50 marks**. The table represents a measure of the attainment levels (on a rating scale of "out of 50') through observation of performance of students in relation to the "translation" of the course outcomes is as listed above. Besides this ATTENDANCE is to be used as a reference - If ATTENDANCE or STUDENT INTERACTION/ INTEREST is not satisfactory (as in remarks column provided) TERM WILL NOT BE GRANTED

	OBJECTIVES/ CRITERIA	C314.1 (out of 50)	C314.2 (out of 50)	C314.3 (out of 50)	C314.4 (out of 50)	C314.5 (out of 50)	REMARKS	% ABSENT

*   The final average % attainment level of course outcomes for the course, for term work may then be calculated.

*   The course outcomes attainment levels for the **ORAL EXAMINATION** should be based on their ACTUAL PROJECT, PROJECT REPORT, PRESENTATION OF THE SAME, and
RESPONSES given during the oral examination. This is for the **ORAL EXAMINATION** of **50 marks**.

CONTENTS

Sr. No.	Name of the Topic	Periods	Marks
1	**ANALYSIS** Electronics/Software Requirement Specification, Enhancement Model, Role of Management in Electronics/Software Development, Role of Metrics and Measurement, Problem Analysis, Requirement Specification, Validation, Metrics, Monitoring and Control.	10	
2	**DESIGN** Problem Partitioning, Abstraction, Design, specification & verification, metrics, Monitoring & Control	12	
3	**TESTING,MAINTENANCE & IMPLEMENTATION OF THE SELECTED PROJECT** Levels of Testing- Functional Testing, Structural Testing, Test Plan, Test Cases Specification, Reliability assessment. Project Management, Cost Estimation, Project Scheduling, Electronics/Hardware/Software Configuration Management, Quality Assurance, Project Monitoring, Risk Management	10	

INSTRUCTIONS:
1. The typed project report must be bound and submitted by each student before the end of the term.
2. One extra copy of the project report per batch must be submitted to the examiner.

4) The assessment of Term-Work is Internal.

RATIONALE:

This subject is classified under Applied Technology courses. In the past decade there has been a rapid development in the field of Power Electronics with the development of newer and high speed power switching and control devices. This subject attempts to cover these new developments and devices along with their applications in the power industry in detail, along with the theoretical background of the construction, characteristics and working of the same. This subject will enable the students to comprehend the theory, construction, concepts and working principles of various advanced power electronic devices and circuits and their applications in industry. The knowledge acquired by student will help them to design, test, troubleshoot and repair power electronic circuits and systems that are widely used in heavy industries, switching and control systems, induction heating, resistance welding and so on.

COURSE OUTCOMES & CO PO MAPPING

SEM VI C 315	ADVANCED POWER ELECTRONICS ELECTIVE II (15 TH COURSE IN THIRD YEAR)
C 315.1	Illustrate the turn on & turn off mechanism of SCR
C 315.2	Demonstrate the need, function and operation of Inverter
C 315.3	Select appropriate Chopper for DC control drives
C 315.4	Compare the principles of AC,DC & Microprocessor, Microcontroller based drives
C 315.5	Enumerate the operation of Power electronics applications
C 315.6	Implement safety measures for over-voltage & over-current fault conditions in power electronics applications

PROGRAMME TITLE: Diploma in Electronics & Telecom. Engineering
SEMESTER : Six

The assessment of term work is Internal.

RATIONALE:

Various numerical computations can be done in the Engineering and Mathematics field by providing various continuous inputs to the system over a period of time. This could be observed statistical data. Along with this the trend of the possible output/s can be fed into the system to that the system develops an artificial learning capability. Thus such a system can be useful for analyzing and predicting possible behavior, solutions and outputs for a given problem or task. Thus Scilab provides the basic foundation that can be used to build upon the various intricacies of artificial intelligence. The study of Scilab is therefore an essential requirement for further study and analysis in areas related to artificial intelligence.

Scilab is free and open source software for numerical computation providing a powerful computing environment for engineering and scientific applications.

COURSE OUTCOMES & CO PO MAPPING

SEM VI C 316	SCILAB (16 TH COURSE IN THIRD YEAR)
C 316.1	Illustrate concepts of Scilab
C 316.2	Categorise basics commands in Scilab
C 316.3	Formulate mathematical problems and implement in Scilab
C 316.4	Design 2-D & 3-D Visualization using Scilab
C 316.5	Implement Control systems operations & Signal Processing operations using Scilab
C 316.6	Demonstrate Modeling & Simulation using XCOS Simulator in
	Scilab

Mr. Rakesh Saroj

Subject Expert

Scilab is released as open source under the CeCILL license (GPL compatible), and is available for download free of charge. Scilab is available under GNU/Linux, Mac OS X and Windows XP/Vista/7/8.

Scilab includes hundreds of mathematical functions. It has a high level programming language allowing access to advanced data structures, 2-D and 3-D graphical functions.

A large number of functionalities are included in Scilab:

- **Maths & Simulation**
  For usual engineering and science applications including mathematical operations and data analysis.
- **2-D & 3-D Visualization**
  Graphics functions to visualize, annotate and export data and many ways to create and customize various types of plots and charts.
- **Optimization**
  Algorithms to solve constrained and unconstrained continuous and discrete optimization problems.
- **Statistics**
  Tools to perform data analysis and modeling
- **Control System Design & Analysis**
  Standard algorithms and tools for control system study
- **Signal Processing**
  Visualize, analyze and filter signals in time and frequency domains.
- **Application Development**
  Increase Scilab native functionalities and manage data exchanges with external tools.
- **Xcos - Hybrid dynamic systems modeler and simulator**
  Modeling mechanical systems, hydraulic circuits, control systems...

In this subject therefore the teacher will provide example situations/ problems which will have to be resolved and the output computed by the student using Scilab.

This subject carries only term work marks. There is no theory examination. There is no practical examination.

LIST OF LABORATORY EXPERIENCES

| EXP. NO.	TITLE	COURSE OUTCOME MAPPING
1	Calculations using scilab	C316.2
2	Creating and working with array of numbers	C316.3
3	To perform different matrix operations using scilab	C316.3
4	To generate addition and subtraction of two given signal (discrete and continuous domain)	C316.4
5	To plot continuous and discrete time unit step, ramp and exponential signal	C316.4
6	To plot sine and cosine functions in scilab	C316.4
7	To plot convolution of two given sequences	C316.5
8	To plot cross correlation of two sequences	C316.5
9	To plot auto correlation of two sequences	C316.5
10	To plot impulse function of a signal	C316.4
11	To compute pole zero plot of a given function	C316.5
12	To plot root locus of a given function	C316.5
13	To perform simulation using xcos simulator (practise 1)	C316.6
14	To perform simulation using xcos simulator (practise 2)	C316.6
15	To perform simulation using xcos simulator (practise 3)	C316.6

The table to measure the attainment levels for TERM WORK (on a rating scale of "out of 50') of the defined course outcomes is as shown in the format given below:

(Note:……the table should progress to the right for Lab Experience 7, 8, 9, ….and so on……)

LAB EXPERIENCE		1	2	3	4	5	6
	COURSE OUTCOMES	C316.2 (out of 50)	C316.3 (out of 50)	C316.3 (out of 50)	C316.4 (out of 50)	C316.4 (out of 50)	C316.4 (out of 50)

1) Theory paper duration 3 hrs.
2) Theory paper assessment is Internal and External.

RATIONALE:

As the title of the course suggests, two major areas are to be focused upon during coverage, discussion and delivery of the topics.
Management in any industry deals with aspects pertaining to finances, research, development of new products, human resources, manufacturing, sales and distribution processes, purchases, demand and supply principles and personnel organization, relationships and management.

Quality Control of any final product is through continuous documentation, monitoring, maintaining all aspects from production to costing to marketing to sales and consumer requirements and behavior, and all the processes involved right from procurement of raw materials to the development and mass manufacturing of the final product. Upon emerging as a final product, it's quality is to be tested, monitored, documented and maintained for consistency of performance with the highest quality possible, ideally nearing a perfection level of 100%.

The objective of this course is to impart the intricacies involved in all the processes pertaining to "Industrial Management and Quality Control".

COURSE OUTCOMES & CO PO MAPPING

SEM VI C 317	INDUSTRIAL MANAGEMENT & QUALITY CONTROL ELECTIVE II (17 TH COURSE IN THIRD YEAR)
C 317.1	Differentiate between Administrations and organizations
C 317.2	Communicate effectively in variety of organizational setting.
C 317.3	Identify the personal characteristics that reflect on the general work needed for the career.
C 317.4	Implement the cost concept and cost estimation for the project budgets and plans.

C 317.5	Analyze the concept of quality control and statistical process control.
C 317.6	Interpret the different meanings of quality concepts and its influence.

| SECTION 1			
Sr. No.	Name of the Topic	Periods	Marks

01	**INDUSTRIAL MANAGEMENT & QUALITY CONTROL C 317.1**
	 Principles and Techniques of Management
	       1.1 Meaning of and differences among business, management, administration and organization
	       1.2 Principles of management.
	       1.3 Functions of management.
	       1.4 Organizational Hierarchy
		07	12

02	**Market and Materials Management. C317.2**
	       2.1.1 Marketing strategy, Market research.
	       2.1.2 Consumer behavior, advertising and sales promotion.
	       2.1.3 Channels of distribution, pricing of products.
		08	12

03	**Human Resource Management C317.3**
	       3.1.Meaning and functions of Human Resource management.
	       3.2.Recruitment, selection, promotion, wages and salary administration, training and development.
		08	16

SECTION 2			
04	**Project and Financial Management C317.4** 4.1 Case studies of project report, preparation of profit and loss statement and balance sheet, ratio analysis. 4.2 Principles of costing, cost sheet preparation, variance analysis, meaning and application of various budgets, types of budgets and their importance.	09	12
05	**Quality Control C317.5** 5.1 Concept of quality and quality control, elements of quality, factors controlling quality of design and conformance, 5.2 process control, inspection planning and scheduling, 7QC (Seven Quality Control) techniques.	08	16
06	**Quality Management C317.6** 6.1 Concepts and applications of Kaizen, quality circle 6.2ISO 9000 series, just-in-time, quality planning and total quality management	08	12

1) The assessment of Term-Work is Internal.

RATIONALE:

Technicalwriting is any written form of writing or drafting technical communication used in a variety of technical and occupational fields.This course will enable the students to analyze the complex technical information and present it in a format that is easy to read and understand. The course includes writing research proposal,writing for Electronic Media such asEmails, letters etc which are some of the most frequently written documents in a business, technical reports to provide readers with information, instructions and analysis on any task and instructional documents like user manuals and troubleshooting guides for electronic equipments.

EXPECTED COURSE OUTCOMES

| SEM VI C318	TECHNICAL WRITING (18TH COURSE IN THIRD YEAR)
C318.1	Distinguish between Data Collection Methods
C318.2	Justify Interpretation technique used for specific Data
C318.3	Organise steps in report writing
C318.4	Design Instructional manuals and technical specifications for users
C318.5	Categorise types of papers and prepare presentation for conference

4.3 Mechanics of writing research report. 4.4 Precautions of writing research report. 4.5 Effective Oral Presentation	

LIST OF LABORATORY EXPERIENCES/ ASSIGNMENTS

| EXP. NO.	TITLE	COURSE OUTCOME MAPPING
1	ASSIGNMENT 1 – Types of Data	318.1
2	ASSIGNMENT 2 – Technical Writing/ Technical Communication	318.3
3	ASSIGNMENT 3 – Feedback Survey Form/ Questionnaire Design using Google Forms	318.2
4	ASSIGNMENT 4 – Seminar Paper/ Presentation	318.4
5	- - - - - - - - - - - - - -	318.X

IMPLEMENTATION METHOD:

All assignments are designed, conducted, implemented, worked upon, submitted and assessed **ONLINE** using **Google Classroom – a technology introduced by Google in 2014, under G-Suite For Education for our domain www.xtechacademicrecords.com** ; The G-Suite for Education dedicated account was approved for St. Xavier's Technical Institute in 2016.

Technical Writing is the first subject for which this has been implemented for distribution of assignment topics, implementation and submission by students and assessment by teachers.

IMPLEMENTATION STRATEGY
Minimum 5 Assignments (Conducted Online using Google Classroom)

The table to measure the attainment levels for TERM WORK (on a rating scale of "out of 50') of the defined course outcomes is as shown in the format given below:

(Note:……the table should progress to the right for Lab Experience 7, 8, 9, ….and so on……)
